Azure Cloud Cost Optimization

How we will reduce your Azure spend by up to 40% with a proven, risk-free approach

25–40%	30 Days	Zero
Typical Savings	Payback Period	Risk Level

WHY AZURE COSTS SPIRAL OUT OF CONTROL

Without a structured cost governance program, most organizations overpay by 30–50% every month.

Idle & Oversized VMs

VMs running at < 5% CPU 24/7. Dev servers left on over weekends.

Orphaned Resources

Unused disks, stale snapshots, unattached public IPs accumulating costs.

No Tagging Strategy

No cost attribution. Nobody owns costs. Budgets are impossible to set.

Pay-As-You-Go Only

No Reserved Instances or Savings Plans — paying full rack rate.

Uncontrolled Egress

Cross-region data transfer and unoptimized CDN driving hidden charges.

No Automation

Manual processes mean waste is discovered months late, if at all.

OUR APPROACH

A 4-Phase Continuous Cost Optimization Model

01

Visibility

Baseline & Discovery

- Enable Azure Cost Management
- Tag all resources
- Identify top 10 cost drivers
- Export billing to storage

02

Quick Wins

Eliminate Waste

- Delete orphaned resources
- Stop idle VMs
- Apply Hybrid Benefit
- Auto-shutdown dev/test

03

Optimize

Rightsize & Commit

- VM rightsizing (Advisor)
- Purchase Reserved Instances
- Savings Plans strategy
- Storage tier automation

04

Govern

Automate & Monitor

- Budget alerts & anomaly detection
- Azure Policy enforcement
- Monthly FinOps reviews
- Power BI cost dashboard

WHAT WE WILL OPTIMIZE

Compute (VMs)

Up to 35%

- Identify idle VMs via CPU metrics
- Rightsize to optimal SKU
- Enable auto-shutdown schedules
- Consolidate workloads to fewer VMs

Reservations & Licensing

Up to 65%

- 1-yr / 3-yr Reserved Instances
- Azure Hybrid Benefit (Windows/SQL)
- Compute Savings Plans
- Dev/Test subscription pricing

Storage & Databases

Up to 40%

- Blob lifecycle (Hot → Archive)
- Auto-pause SQL Serverless DBs
- Elastic Pool right-sizing
- Delete orphaned snapshots & disks

Tagging & Governance

Visibility

- Enforce mandatory tags via Policy
- Chargeback to cost centers
- Budget alerts at 80% / 100%
- Restrict expensive VM SKUs

Networking

Up to 20%

- Delete idle Load Balancers
- Remove unused Public IPs & NICs
- Optimize NAT Gateway usage
- Azure CDN for static assets

Automation & Monitoring

Ongoing

- Start/Stop Runbooks (save 65%)
- Anomaly detection alerts
- Power BI cost dashboard
- Monthly optimization sprints

DELIVERY TIMELINE

30 – 60 – 90 Day Action Plan

Days 1–30

Visibility & Quick Wins

Save: 10–15%

- Enable Azure Cost Management
- Enforce tagging across all resources
- Delete orphaned disks, IPs, NICs
- Apply Azure Hybrid Benefit
- Enable auto-shutdown (dev/test VMs)
- Set budget alerts

Days 31–60

Rightsize & Commit

Save: 20–30%

- Rightsize top 20 VMs (Advisor)
- Purchase 1-yr Reserved Instances
- Storage lifecycle policies
- Auto-pause dev/test SQL databases
- Implement Compute Savings Plans
- Review & reduce idle databases

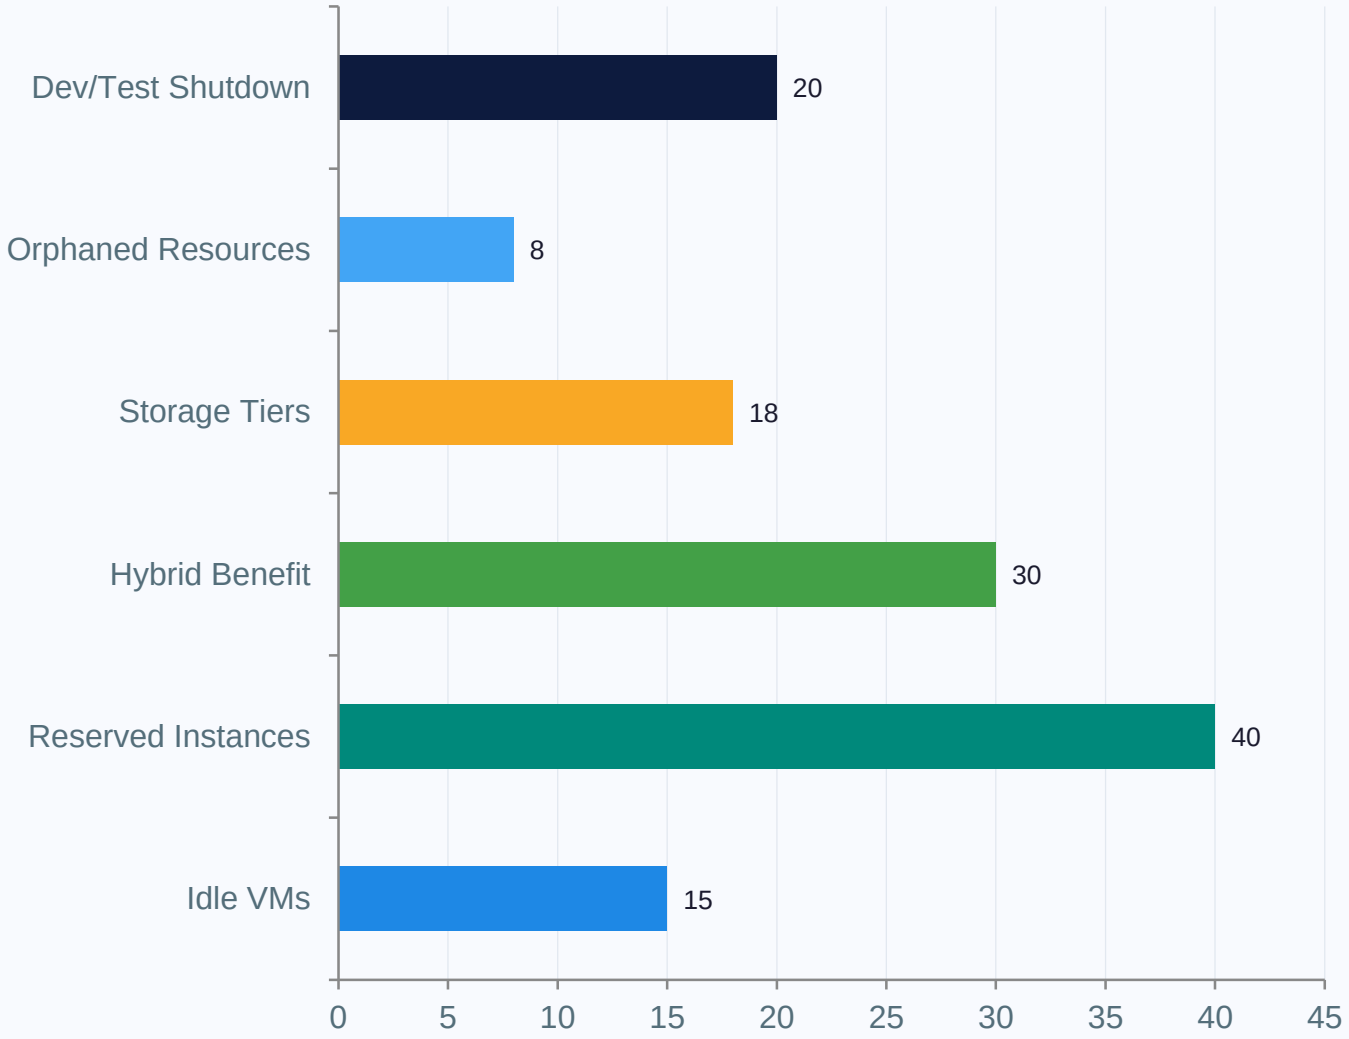
Days 61–90

Govern & Automate

Save: 35–40%

- Monthly FinOps review cadence
- Automated start/stop runbooks
- Power BI executive dashboard
- Restrict SKUs via Azure Policy
- Review & expand RI coverage
- Anomaly detection fine-tuning

EXPECTED SAVINGS BREAKDOWN



25–40%

Total Monthly Savings

30 Days

Time to First Savings

12x

Typical ROI on engagement

** Savings estimates based on industry benchmarks. Actual results depend on current environment audit*

WHAT YOU RECEIVE

Deliverables & Our Commitment

Azure Cost Assessment Report

Full audit of your Azure environment — every idle resource, every RI opportunity, and top 10 cost killers identified.

Power BI Cost Dashboard

Live, drill-down dashboard showing costs by service, resource group, team, and environment — updated daily.

Automation Scripts & Runbooks

PowerShell + Azure CLI scripts for auto-shutdown, orphan cleanup, tagging, and lifecycle management. Fully documented.

Tagging & Policy Framework

Mandatory tag schema enforced by Azure Policy — with chargeback reports so every team owns their spend.

RI & Savings Plan Strategy

Data-driven recommendation on which workloads to reserve and at what term — maximizing discount without risk.

Monthly FinOps Reviews

Dedicated monthly review sessions to track savings, identify new opportunities, and keep costs trending down.

NEXT STEPS

Let's start saving your Azure budget today.

No upfront cost. No disruption.
Just measurable, sustainable savings.

1. Schedule a 30-min discovery call
2. We run a free 1-week cost assessment
3. You receive a detailed savings roadmap
4. We begin execution — you start saving
